

Lakeridge Middle School

This project for new construction will replace the current school and reduce overcrowding. The existing gymnasiums will be remodeled and incorporated into the new school, which will be located behind the present building. When the new school is complete, the old school will be razed and new athletic fields will be developed.

Construction of a new building will include increased square footage so that current portable classrooms can be eliminated. Also, the cafeteria and commons area will be significantly enlarged to meet the needs of a growing student enrollment.

*Tentative Construction Start March 2009
Tentative Project Completion July 2010*

Victor Falls Elementary School

A school modernization project to update and modernize major mechanical systems, improve wiring and technology infrastructure to support computers in the classroom and bring building up to all current energy, seismic, fire and life safety building codes.

*Tentative Modernization Start May 2009
